

Why we want to talk to you on this topic

If you have not concluded or extended a full maintenance contract, you bear the risks of repair costs and loss of earnings as the result of internal operational damages and force majeure (fire, lightning, storm, flood, vandalism, etc.). The EVK Wind Cover offers you the opportunity to conclude a machine breakage insurance policy including operational interruption, so that you don't have to bear unforeseen damage alone.

Why do you even figure in the equation at all?

- Machine breakage insurance is secondary value cover (EVK has agreed defined depreciation rates for components with limited lifetimes)
- Machine breakage insurance contains exclusions, for which no benefits are paid (e.g. mere damage from wear and tear)

Please note that the majority of organisational management is included in the full maintenance contract. Without a full maintenance contract, you yourself are responsible for the implementation of technical obligations under the insurance contract. The conclusion of a basic maintenance contract is obligatory, and the content of the maintenance contract must match the specified inspections (under the insurance contract). Please keep this in mind in your negotiations.

Examples of damage:

Machine breakage (internal operational damage):

A short circuit unexpectedly occurs in the generator windings of the generator. The damages amount to 100,000 €. The residual values for the damaged generator are already included in the invoice for the replacement generator.

Machine operational disruption (force majeure):

Following a lightning strike, the rotor blade structure will need to be repaired.

NB: The loss of earnings is insured in each case after deduction of the contractually agreed deductible within the framework of the insurance sum and indemnity period.

EVK cover concept:

Highlights:

- Advice on necessary and required reports/tests before conclusion of the contract
- Condition-oriented inspection (ZOP) according to BWE principles for full protection
- Rotor blade assessment including lightning resistance measurements for comprehensive coverage
- Advice on technical responsibilities in the insurance contracts – coordination with basic maintenance contracts
 - Full protection: e.g. every 2 years ZOP
 - Comprehensive: visual inspection of the rotor blades and lightning resistance measurement every two years
- In-house damage engineers support you in claim events

Why you should work with us:

- The managing director of EVK is an operator himself and understands the concerns of his customers
- EVK has been successfully active on the market for more than 25 years.
- More than 10,000 EE owners put their trust in us.
- EVK coordinates its insurance concepts with multiple risk carriers to ensure insurance protection.
